Apache (it supports Windows with IIS) a) Apache is an open source Web server developed by the Apache HTTP Server project. It is able to handle more than one million simultaneous requests per second and is among the most used servers of the Internet. b) Apache is also able to handle thousands of domain names per host without the need for separate domains. c) Apache is able to read and process HTML, XML, XHTML, JavaScript, CSS and PHP documents. d) Apache is able to process requests through encrypted SSL connections (HTTPS), including requests for web pages, directories, and through CGI scripts. e) Apache is able to efficiently provide high quality web content to the users.

Apache 2.4.7 Apache 2.4.7 is the latest version of the web server and provides the ability to support eXtended Server Side Includes (XSSI).

Apache 2.4.16 Apache 2.4.16 is a bug fix release of Apache 2.4.7 and contains some other fixes.

Ubuntu and Debian Apache is supported on many distributions of Linux, such as Ubuntu, Debian and many other versions.

What's New

- Enhanced performance when handling large numbers of concurrent requests
- Improved certificate verification logic
- Improved timeout reporting
- Other fixes, enhancements, and code improvements

Note: You can run Apache on both Windows and Linux, but you must have Apache for Windows in order to run Apache on Linux. The two platforms support independent native XML and HTML parsers.

Several people have asked how much (or little) of the new java.time library is backward compatible with the old APIs. The java.time classes are all in new package java.time.*. The new classes implement all the new methods and classes of java.time. The old classes in the java.time.* package are therefore methods and classes from the old API, but with the implementation in the new java.time.* package. This sounds simple and easy, but many people seem to get confused. I am, by the way, in the process of fixing this. If you look at the javadoc, you will see the following: Java SE 8 adds the java.time package for classes supporting ISO 8601 and the H.323 and SIP RFCs for messaging.
