What's more, you can use the option to safely wipe your disk, or the Cleanup function to remove expired, deleted or empty files. If you're aiming to test your software today, you can create your first virtual disk image in just a few clicks, either from an existing partition, or from a free space on your hard drive. On the other hand, if you already have a partition that you'd like to backup, you'll just need to select the existing one from the list of hard drives, then follow some steps and you'll be able to rest easy, knowing that your files are safe and that you can restore them whenever you want. You can test the program for free today, and if you like it, you can continue your action with its full edition. In its current version, it is mainly designed to back up, clone and restore partitions and disks, so if your hard disk is severely damaged, you should try an advanced software to recover the data. Backups or copy disks and partitions is what this software is about, but it is not the only purpose of the program, we are making it clear that HDClone X is not just an application that can help you on the day of the disaster, because the data could be easily lost, so it is important to back it up and to take precautions to secure your sensitive information.
